BACK RACK
GREY TOYOTA TACOMA
34.87934, -86.24786
2025-02-10 16:05Z

You can learn more at:
deflock.me

They are a brand of Automated License Plate Reader (ALPR) that uses AI image processing to read and document every single car that drives by. This is used to **track every single driver**, even if they are **NOT suspected of any crime** and **without any warrant**. This information gets used by various levels of government, from local police to federal agents like ICE or CBP.
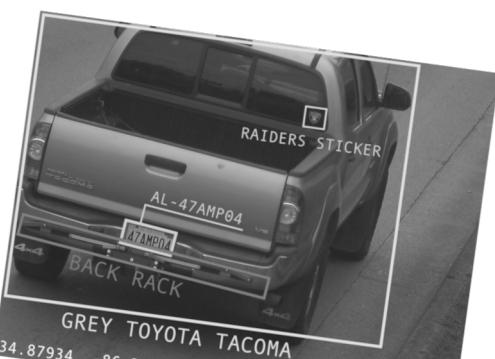

You can also read up on Flock news stories at:

Why Are Flock Cameras Bad?

There is no study that shows that cities with them have reduced crime or more solved cases. **For no provable benefit**, these cameras have:

- Known cases of police stalking exes
- **Massive data leak potential**
- Exploits for hackers to plant evidence
- Exploits for foreign states to access
- Been hacked by civilians already
- Given their data to Palantir

Here are some YouTube videos on

What Can We Do?

The only thing we can (legally) do is to **complain to the City** to get these things removed. Flock is just one brand of ALPR. We don't want just to switch to another tech startup's camera system; we want **all ALPRs gone**! Complain about these roadside cameras to the mayor and city council! Contact the Police and Fire Commission about these **STUPID CAMERAS!!!**
